

Bio-Sok... The Revolutionary Way to Effectively Eliminate Bilge Oil

IMTEC
INNOVATION
AWARD

Bio-Sok is easy to use.

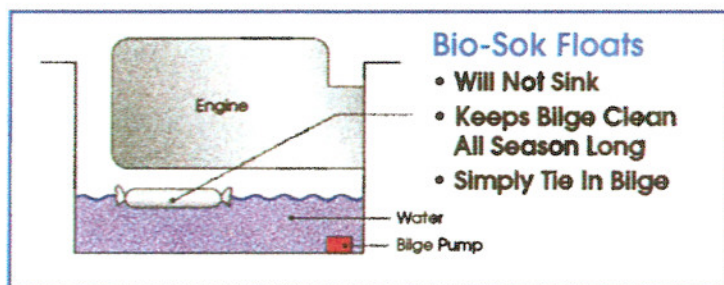

Just put **Bio-Sok** into your bilge at the beginning of the season, and that's it. **Bio-Sok** works day in, day out - continually absorbing and breaking down any spilled or leaking bilge oil.

Bio-Sok is environment friendly.

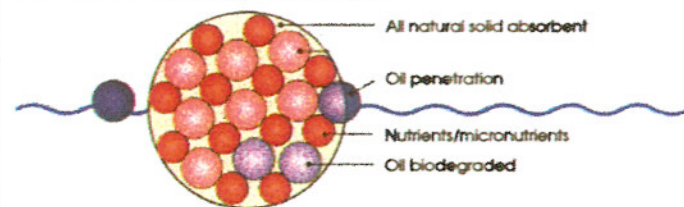

Bio-Sok is specially designed to not only absorb the oil, but biodegrades it as well. The indigenous microorganisms biodegrade that dirty, ugly oil, which in turn protects the environment and aquatic life.

Bio-Sok is effective.

Bio-Sok contains the same ingredients used to clean major oil spills. Plus, **Bio-Sok** floats - it never sinks. . . it's always right where oil collects.

Bio-Sok Biodegrades Oil

When you clean up bilge oil the wrong way, with soaps and emulsifiers, the oil is only encapsulated, so when pumped out of the bilge the oil sinks. You not only harm the environment, but if discovered, you put yourself at risk for hefty fines as well.

Play it safe . . . make sure **Bio-Sok** is hard at work in your bilge today.

Thousands of
satisfied boat owners
can't be wrong.

"One impressive new product...BIO-SOK® will now be placed in the bilge of every boat tested by our magazine..."
