

OIL SPILL CONTAINMENT... NATURALLY

BioBooms® contain a spreading spill while the PRP® inside consumes the pollution, eliminating it safely and cleanly. Whether the spill is in open water, marinas, holding ponds or lagoons, BioBooms hold the spill in place while the PRP works. When the oil is gone, the PRP degrades itself. There's no toxic waste requiring tedious expensive disposal.

Custom made in lengths up to 10 feet and three inches in diameter, each BioBoom contains eight pounds of PRP. When the PRP comes in contact with oil, it immediately absorbs up to twice its weight in contaminant and it degrades much more oil over time.

When the BioBoom becomes saturated with oil, simply leave it in place until the PRP degrades the oil and then itself. Then throw away the empty sleeve in accordance with local, state and federal regulations. It's quick, clean and easy.

THE COMPLETE OIL SPILL REMEDIATION SYSTEM

The PRP in a BioBoom consists of tiny spheres of treated wax, which contain nutrients. When a wax sphere comes in contact with spilled oil, it binds with the hydrocarbons. Nutrients in the sphere help microorganisms from the immediate environment flourish until they eat every droplet of oil.

PRP is also available as a loose powder for open water spills and in BioSoks® for boat bilges.

BIOBOOMS®:

BIOBOOMS CAN BE CUSTOM MADE UP TO 10 FEET IN LENGTH

CAN IMMEDIATELY ABSORB 16 POUNDS OF CONTAMINANTS, AND IT CAN DEGRADE MUCH MORE OVER TIME

PERFECT FOR MARINAS, LAGOONS AND HOLDING PONDS

100% NATURAL, BIODEGRADABLE AND NONTOXIC
